Monitor Pinholes

Our Model 3050 OPTOMIZER® Pinhole Detection Technology makes it possible to economically add pinhole detection capabilities to your web manufacturing processes. The system combines a high speed CCD Line Scan Sensor with state-of-the-art signal processing technologies to achieve very high resolution detection of pinhole defects. Depending on web speed, defects as small as 0.0008 sq. mm can be detected. The sensor housing of the system is designed for mounting to existing process control equipment, such as a basis weight measurement sensor, that is capable of providing motion in the cross machine direction. Mounted to such equipment, the Model 3050 OPTOMIZER® can provide continuous sampling inspection of the web material.

Analyze Trends

Our QAMS® Quality Assurance Management System software is included with each system to provide charting, footage tracking, product code identification, material and process traceability, real time and historical reporting, on-line diagnostics, and additional control and analysis functions.

Permanently Identify Defects

Our Model 1280 Guardian® Multicolor Edge Marking™ Technology can be combined with the Model 3050 OPTOMIZER® Pinhole Detection System to provide visible edge marks for permanent identification of defect locations within each roll. These marks can be detected by on-line sensors for automatic control of subsequent processing equipment such as coaters, slitters, sheeters, and rewinders. These marks can also be detected visually as concentric circles on the outside edge of the roll for manual sorting or grading operations.
Model 3050 OPTOMIZER® Pinhole Detection Technology

Reliability Equals Profit
The reliability of our 3050 OPTOMIZER® Pinhole Detection Technology is unparalleled in the industry. Regardless of the application, machine or surroundings, our sensors will not quit. Our technology does not require operational intervention, adjustments, re-calibration and monitoring, unlike competitive solutions. Our technology is not designed as the “Quick Fix”, but is a committed investment that ensures cost effective quality assurance and control that translates into a much higher ROI and increased profitability.

Process Diverse Materials
Our 3050 OPTOMIZER® Pinhole Detection Technology provides accurate, consistent, and reliable on-line inspection for a wide variety of web materials including cotton fiber bond, embossed; text; and specialty papers, de-inked recycled papers, films, gloss and matt coated offset and rotogravure papers, lightweight coated groundwood papers, magnetic media, metals and foils, plastics, textiles and rubber.

Simple, Quick and Effective
Easy to set up and operate, and harmonious with logic systems and programmable controllers, the MV-PHS3050 pinhole analysis technology can be easily integrated on any application that calls for the detection of and analysis of pinhole type defects contained within the web material process. Modular in design, our pinhole analysis technology does not require intervention, complicated setup procedures or constant tweaking.
